

## EduFuture

Established in Finland in 2014, EduFuture was one of the first educational consultancy firms offering affordable tailored study visits to the Finnish education system. Ever since the start, their main goal has been to give everyone a chance to discover, discuss, share knowledge, change ideas and experience the Finnish, Swedish and Estonian schools first-hand. Together with experts, schools, students and teachers they explain how the Finnish education system operates at all levels and how it assures equality in excellent education outcomes. School visits are tailored and cover the whole education system from early childhood education to secondary school, allowing participants to gain deeper insights into some leading and high-performing education systems.
